SYN-2026-010	2026-06-02	Packaging damage	Major	Open

3 AI-drafted assessment

Demo mode: the text below is a prewritten sample response for the synthetic data. It was not produced by Copilot.

Summary

Between 2026-01-12 and 2026-06-02 the workbook holds 10 complaints. Packaging damage is the largest category with 5 of 10 cases (50 %). One case is rated critical: a foreign fibre found in a cream [SYN-2026-007]. Six cases are still open. The monthly count is flat at one or two cases per month, so the period shows no rise in volume.

Trends

- Packaging damage appears in five of the six months and in two product groups (tablets, capsules). The transport notes for [SYN-2026-006] and [SYN-2026-008] point to handling in shipment rather than to the primary packaging.
- Label or print issues occur twice [SYN-2026-002] [SYN-2026-009], with different defects (illegible expiry date, missing leaflet). The data does not show a common cause.
- No month stands out. January, March, April and May each have 2 cases; February and June have 1.

Cases needing attention

- [SYN-2026-007]: critical severity, still open, sample requested but not yet received. The lab request lists fibre identification and a retained sample comparison.
- [SYN-2026-010]: major severity, a broken tablet in a cracked blister. This is the only packaging case with damage to the product itself.
- [SYN-2026-005]: major severity, missing measuring cup, open. A missing dosing device can lead to dosing errors by the patient.

Suggested follow-up

- Track the returned sample for [SYN-2026-007] and record the fibre identification result in the case file.
- Ask the carrier for damage data from the regional hub named in the transport notes and compare it with [SYN-2026-006] and [SYN-2026-008].
- Check whether [SYN-2026-010] and the other blister cases [SYN-2026-004] share a packaging line or a packaging material lot.
- Review the carton filling check for [SYN-2026-005] and [SYN-2026-009], since both concern a missing component.

Data gaps

- The workbook has no batch or lot numbers, so the review cannot tell whether cases share a batch.
- Sales or shipment volumes per month are missing. Without them a complaint rate cannot be calculated; only counts are shown.
- [SYN-2026-002], [SYN-2026-003], [SYN-2026-004], [SYN-2026-005] and [SYN-2026-009] have no case documents.

4 Automated checks

Check	Result	Detail
Response is not empty	pass	2312 characters
Response differs from prompt	pass	
Required sections present	pass	all present
Cited case IDs exist	pass	9 case IDs cited, all found in the input

5 Review and sign-off

This report is a draft until a reviewer has checked every statement in section 3 against the case records and signs it with Approve-ComplaintDossier.ps1. The signature and the file hashes are recorded in audit.json.

Approval is refused while an automated check in section 4 has failed. A reviewer can accept failed checks only by giving a written justification, which is printed here and stored in audit.json as a documented exception.
